

Qwest[®] Dedicated Domestic Outbound/ Inbound Long Distance Diversity

Description

Qwest Dedicated Domestic Outbound/Inbound Long Distance Diversity Service allows you to connect to your portfolio of Qwest products and services on a diverse-path, end-to-end, secure connection. Due to the threat of targeted interruptions of corporate and carrier communication network services, Qwest has developed an enhancement that provides survivability of traffic and critical communications. Service paths are ordered, engineered and tracked to provide and maintain physically separated connections from your premises to the local Qwest point of presence (POP), and if applicable, through the Qwest national network, end to end.

There are two Diversity options under Qwest Dedicated Domestic Inbound/Outbound Long Distance Diversity:

Card Diversity

Qwest Domestic Outbound and Inbound Long Distance terminates to Qwest voice switching systems utilizing multiple service modules. These units are electronically protected to allow Qwest engineering to terminate multiple customer connections on a Qwest switch and maintain highly reliable voice services. With Qwest Long Distance Diversity Service, you have the option to assign your diverse access circuits to different Qwest switch voice ports that terminate on a single Qwest voice-services switch.

Switch Diversity

With Qwest Long Distance Diversity you have a primary circuit and a secondary access circuit terminated to geographically separated Qwest voice switch systems. This solution may be designed to terminate in Qwest switches in separate POPs or within the same POP.

Value proposition

You can increase security by adding a second service as another level of protection to your primary service. Now you can add this enhanced survivability through a single provider who has demonstrated experience at designing these complex solutions.

Benefits

- Provides an extra level of service reliability to maximize uptime for other Qwest products
- Allows small- to medium-sized businesses the same reliable, scalable and secure connectivity as larger businesses
- Provides disaster recovery options
- Provides greater level of survivability in the event of:
 - Catastrophic loss of buildings etc.
 - Loss of POPs, central offices or serving wire centers
 - Loss or cut in the fiber optic cables
 - Failure of transmission due to equipment
 - Loss of electrical power

Features

- Custom engineered solutions based on your diversity requirements and available network facilities
- Complete offering of services in DS-1, DS-3, OC-3, OC-12 and OC-48 transmission rates on existing Qwest facilities (DS-0 and fractional DS-1 service is not available)

Qwest Diversity Service helps to keep mission-critical services operational during adverse situations—a customized solution that meets your diversity needs.

Qwest Dedicated Outbound/Inbound Long Distance Diversity service is available to large businesses in the continental U. S. Price varies depending on circuit selected and other factors. Monthly recurring charges apply. Offered with Qwest Local Access Diversity offer. Qwest reserves the right to reject any order for diverse circuits.
